1. INTRODUCTION

The GitHub Login Page is a web application interface developed using **HTML** and **CSS**. It is designed to provide a secure and user-friendly authentication system where users can enter their username/email and password to access their GitHub accounts. The page follows GitHub's modern dark-themed design and includes essential login features such as password recovery, social login options, account registration, and passkey authentication. This project helps in understanding web page structure, form creation, CSS styling, layout design, and responsive user interface development.

3. OUTPUT

4. CONCLUSION

This project successfully demonstrates the creation of a GitHub Login Page using HTML and CSS. Through this project, various web development concepts such as form design, CSS styling, responsive layout, button effects, and user interface design are implemented. The login page serves as a foundation for integrating backend authentication systems in future web applications.
